| <input type="checkbox"/> Buffing Screenbacks | <input type="checkbox"/> Putty to match floor |   |

1. Belt Sander – sand the floor with the grain using 40 Grit Paper.  
(use heavier paper first if old flooring or sand the floor on 45 angle.)
2. At this time fill any holes or gaps with a putty if necessary.
3. Once putty is dried using the belt sander – sand the floor with the grain, using 80 Grit Paper.
4. Edger – sand around the edges using the 80 Grit discs.
5. Scrape the corners where the edger does not reach using a floor scraper.
6. Using the Polivac & 120 Grit screenback, buff the floor. Ensure that all sanding marks from the belt sander are removed.
7. Vacuum floor thoroughly
8. Apply 1<sup>st</sup> coat of primer using a mohair roller for big areas and a brush for small hard to reach areas and around the edges.
9. Once dried, vacuum thoroughly and apply the first coat of coating using the same method as the primer.
10. Once dried, using a 220g screenback, buff the floor.
11. Vacuum once again very well. Apply 2<sup>nd</sup> coat to flooring in your desired gloss level.
12. Enjoy your flooring!
13. Refer to our brochure on floor maintenance to keep it looking great!

Please note: Whilst this is a guide on how to sand and polish your flooring and as all floors are different, Marques Flooring does not take responsibility for the finish of your flooring. If you have any questions or concerns, we are only a phone call away!
